Operations and is not part of the Official Record**

**BEST AVAILABLE IMAGES**

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images include but are not limited to the items checked:

- BLACK BORDERS**
- IMAGE CUT OFF AT TOP, BOTTOM OR SIDES**
- FADED TEXT OR DRAWING**
- BLURRED OR ILLEGIBLE TEXT OR DRAWING**
- SKEWED/SLANTED IMAGES**
- COLOR OR BLACK AND WHITE PHOTOGRAPHS**
- GRAY SCALE DOCUMENTS**
- LINES OR MARKS ON ORIGINAL DOCUMENT**
- REFERENCE(S) OR EXHIBIT(S) SUBMITTED ARE POOR QUALITY**
- OTHER: \_\_\_\_\_**

**IMAGES ARE BEST AVAILABLE COPY.**

As rescanning these documents will not correct the image problems checked, please do not report these problems to the IFW Image Problem Mailbox.

Please find below and/or attached an Office communication concerning this application or proceeding.

<b>Office Action Summary</b>	<b>Application No.</b>	<b>Applicant(s)</b>	
	10/083,407	LESAGE, PHILIPPE	

## Office Action Summary

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

1) Responsive to communication(s) filed on 30 June 2004.  
 2a) This action is FINAL.                    2b) This action is non-final.  
 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

### Disposition of Claims

4) Claim(s) 2-5, 7 and 8 is/are pending in the application.  
 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.  
 5) Claim(s) \_\_\_\_\_ is/are allowed.  
 6) Claim(s) 2-5, 7 and 8 is/are rejected.  
 7) Claim(s) \_\_\_\_\_ is/are objected to.  
 8) Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

### Application Papers

9) The specification is objected to by the Examiner.  
 10) The drawing(s) filed on \_\_\_\_\_ is/are: a) accepted or b) objected to by the Examiner.  
     Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
     Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).  
 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

### Priority under 35 U.S.C. § 119

12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).  
 a) All    b) Some \* c) None of:  
 1. Certified copies of the priority documents have been received.  
 2. Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.  
 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

### Attachment(s)

1) Notice of References Cited (PTO-892)  
 2) Notice of Draftsperson's Patent Drawing Review (PTO-948)  
 3) Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)  
     Paper No(s)/Mail Date \_\_\_\_\_

4) Interview Summary (PTO-413)  
     Paper No(s)/Mail Date. \_\_\_\_\_

5) Notice of Informal Patent Application (PTO-152)

6) Other: \_\_\_\_\_

## DETAILED ACTION

### *Drawings*

1. Figure 1 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.121(d)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

The office notes replacement Figure 1, filed 24 March 2004, labeled as "Related Art". However page 4, lines 33-35 of the specification describe Figure 1 as a "known magnetic circuit".

### *Specification*

2. The following guidelines illustrate the preferred layout for the specification of a utility application. These guidelines are suggested for the applicant's use.

#### **Arrangement of the Specification**

As provided in 37 CFR 1.77(b), the specification of a utility application should include the following sections in order. Each of the lettered items should appear in upper case, without underlining or bold type, as a section heading. If no text follows the section heading, the phrase "Not Applicable" should follow the section heading:

- (a) TITLE OF THE INVENTION.
- (b) CROSS-REFERENCE TO RELATED APPLICATIONS.
- (c) STATEMENT REGARDING FEDERALLY SPONSORED RESEARCH OR DEVELOPMENT.

(d) INCORPORATION-BY-REFERENCE OF MATERIAL SUBMITTED ON A COMPACT DISC (See 37 CFR 1.52(e)(5) and MPEP 608.05. Computer program listings (37 CFR 1.96(c)), "Sequence Listings" (37 CFR 1.821(c)), and tables having more than 50 pages of text are permitted to be submitted on compact discs.) or  
REFERENCE TO A "MICROFICHE APPENDIX" (See MPEP § 608.05(a). "Microfiche Appendices" were accepted by the Office until March 1, 2001.)  
(e) BACKGROUND OF THE INVENTION.  
(1) Field of the Invention.  
(2) Description of Related Art including information disclosed under 37 CFR 1.97 and 1.98.  
(f) BRIEF SUMMARY OF THE INVENTION.  
(g) BRIEF DESCRIPTION OF THE SEVERAL VIEWS OF THE DRAWING(S).  
(h) DETAILED DESCRIPTION OF THE INVENTION.  
(i) CLAIM OR CLAIMS (commencing on a separate sheet).  
(j) ABSTRACT OF THE DISCLOSURE (commencing on a separate sheet).  
(k) SEQUENCE LISTING (See MPEP § 2424 and 37 CFR 1.821-1.825. A "Sequence Listing" is required on paper if the application discloses a nucleotide or amino acid sequence as defined in 37 CFR 1.821(a) and if the required "Sequence Listing" is not submitted as an electronic document on compact disc).

### ***Claim Objections***

3. The claims are objected to because of the following informalities: Each claim must be the object of a sentence starting with "I (or we) claim," "The invention claimed is" (or the equivalent). See MPEP 608.01(m) Appropriate correction is required.

### ***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 8, 2-4, and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yamamoto (UK Patent Application GB 2,031,2147 A) in view of Ueda et al. (US Patent 5,751,828) and in further view of Saik et al. (Hereinafter "Saik") (US Patent 4,312,118).

Regarding Claim 8, Yamamoto discloses a magnetic circuit (Figure 1) for an electrodynamic loudspeaker with a moving coil (voice coil 5), said magnetic circuit having a shape which is axisymmetric about an axis of symmetry and comprising: a dish-shaped yoke with a flat bottom (yoke 1), whose edge, away from said bottom, is provided projecting toward said axis with respect to the side wall of said dish and defining a circular opening which is recessed with respect to said wall (Figure 1 discloses opening near reference 5); a magnet (magnet 2), placed centrally inside said yoke and borne by said flat bottom; and a cylindrical core (core 3), placed centrally inside said yoke and borne by said magnet, the part of said core away from the magnet being opposite said circular opening of the yoke and defining, with the later, an annular gap (Yamamoto discloses a gap Page 1, lines 48-55), in which said moving coil (voice coil 5) is placed coaxially with the axis of said magnetic circuit thereby being the clearance height available for the coil inside said yoke being greater than the maximum distance that said coil can travel, inside said yoke, toward the bottom thereof, wherein: the diameter of said magnet is greater than that of said core (Figure 1 discloses length of magnet 2 greater than base of core 3), such that said magnet has a peripheral projection which is annular and radial, with respect to said core; and the clearance height for the coil is limited, on the side facing said magnet, by said peripheral

projection, such that this clearance height is determined solely by said core (Figure 12 shows base of core 3 greater than gap limiting clearance height). Yamamoto does not disclose the magnet being disk-shaped. However, one of ordinary skill in the art at the time the invention was made would know that disk-shaped magnets are commonly used in magnetic circuits as disclosed by Saik (Fig. 1, disk-shaped magnetic 20). Saik discloses constant magnitude all around said axis of symmetry (Figure 1, magnet 20; constant magnitude all around axis of symmetry is inherent in disk-shaped objects). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to use a magnetic in the form of a disk. Yamamoto further discloses a magnetic circuit but does not disclose it being made of a sintered neodymium-iron-boron (Nd-Fe-B) ternary alloy. Ueda et al. discloses a magnetic circuit teaching in order to attain a loudspeaker which is small, light-weight, and thin, rare earth metals are used as a magnet in a loud-speaker such as an anisotropic Nd-Fe-B system sintered magnet. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to use a magnetic made of Nd-Fe-B to obtain a small, light-weight and thin speaker for a high quality audio output.

Regarding Claim 2, Yamamoto further discloses the peripheral radial projection of the magnet with respect to the core (Figure 1) being less than three times the thickness of the magnet which conforms to being at the most equal to three times the thickness of said magnet.

Regarding Claim 3, the term "about" is broad and not defined in the specification. Therefore, it is interpreted to include as Yamamoto further disclosing (Figure 1) the

peripheral radial projection of the magnet with respect to the core is about the thickness of said magnet.

Regarding Claim 4, Yamamoto further discloses (Figure 1) said core (core 3) comprises, in contact with said magnet (magnet 2), a disk-shaped projecting heel (bottom portion of core 3b), the diameter of which is greater than that of the rest of the core, but smaller than that of the magnet; and the clearance height for the coil is limited, on the side facing said magnet, by said projecting heel.

Regarding Claim 7, Yamamoto further discloses an electrodynamic loudspeaker (Figure 1) which comprises a magnetic circuit.

6. Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over Yamamoto as modified as applied to claim 8 above, and further in view of Ssutu (US Patent 6,535,613). Yamamoto discloses a magnetic circuit as stated apropos of claim 8 but does not disclose an axial passage. Ssutu discloses an axial passage (Figure 1) passing through the back plate 24 (i.e. flat bottom of yoke), magnet (magnet 26), and pole piece 30 (i.e. core). Ssutu discloses airflow through the speaker is helpful for cooling the device (Column 1, lines 6-13) avoiding a reduction in acoustic output due to temperature-related voice coil resistance (Column 1, lines 49-56). Therefore it would have been obvious to one of ordinary skill in the art at the time the invention was made to include an axial passage to allow airflow resulting in a higher quality audio signal.

### ***Conclusion***

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Justin Michalski whose telephone number is (703)305-5598. The examiner can normally be reached on 8 Hours, 5 day/week.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Bill Isen can be reached on (703)305-4386. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
